

The scatter plot displays the relationship between the number of species (S) and the number of individuals (N). The x-axis, labeled 'Number of individuals', ranges from 0 to 2000. The y-axis, labeled 'Number of species', ranges from 0 to 100. The data points are colored blue, red, and green. A dense cluster of points is visible near the origin (0, 0), with a few outliers at higher values of both variables. The points are scattered across the plot, showing a positive correlation between the number of individuals and the number of species.
